

Предмет	Управление и автоматизация баз данных
Курс	4
Семестр	1
Работа	Lab11 extensions
Дата	20.10.2021
Группа	484
Фамилия	Серебряков
Имя	Максим
Отчество	Андреевич

1 Установка Pager из Release версий

```
postgres@debian:~/extensions$ cd ~
postgres@debian:~$ curl https://codeload.github.com/okbob/pspg/tar.gz/refs/tags/5. > pspg.tar.gz
```

curl

2. tar -vfx pspg.tar.gz

```
postgres@debian:~$ cd pspg-5.4.1/
postgres@debian:~/pspg-5.4.1$ ls
aclocal.m4      config.o          linebuffer.d     readline.d       table.d
args.d          config.status     linebuffer.o     readline.o       table.o
args.o          configure         Makefile         README.md        tests
autogen.sh      configure.ac      menu.d           screenshots      theme_loader.d
bash-completion.sh csv.d             menu.o           sort.d           theme_loader.o
bscommands.d    csv.o             pgclient.d       sort.o           themes.d
bscommands.o    export.d          pgclient.o       src              themes.o
commands.d      export.o          print.d          st_menu.d        ToDo
commands.o      infra.d           print.o          st_menu.o        tools
config.d         infra.o           pspg             st_menu_styles.d unicode.d
config.log       inputs.d          pspg.d           st_menu_styles.o unicode.o
config.make      inputs.o          pspg.o           string.d
config.make.in  LICENSE          pspg.spec        string.o
```

Tar archive

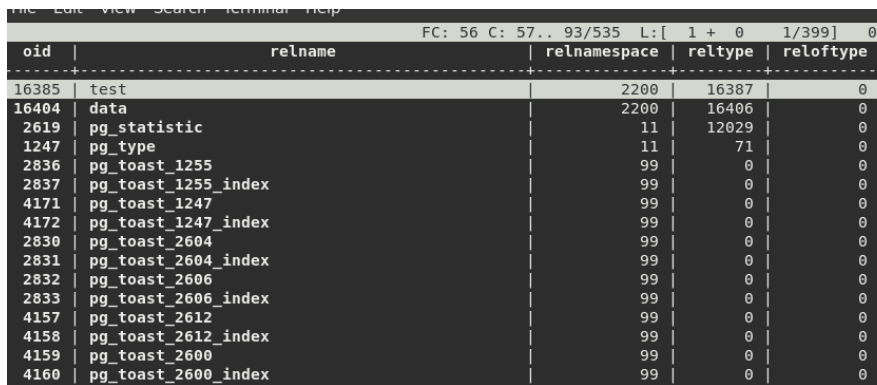

3. Make -j 2

4. nano .bashrc

```
GNU nano 3.2 .bashrc
. /etc/bash_completion
fi
fi
export PGDATA=/usr/local/pgsql/data
export PATH=$PATH:/usr/local/pgsql/bin
export PAGER="/home/postgres/pspg-5.4.1/pspg -s -t"
```

PAGER=

5. psql Select * from pg_class

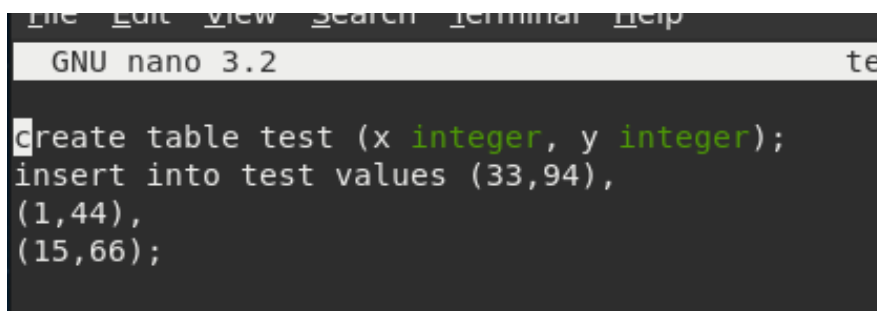

The screenshot shows a psql terminal window with the command 'select * from pg_class;' executed. The output is a table with columns: oid, relname, relnamespace, reltype, and reloftype. The table lists various system catalogs and their indexes.

oid	relname	relnamespace	reltype	reloftype
16385	test	2200	16387	0
16404	data	2200	16406	0
2619	pg_statistic	11	12029	0
1247	pg_type	11	71	0
2836	pg_toast_1255	99	0	0
2837	pg_toast_1255_index	99	0	0
4171	pg_toast_1247	99	0	0
4172	pg_toast_1247_index	99	0	0
2830	pg_toast_2604	99	0	0
2831	pg_toast_2604_index	99	0	0
2832	pg_toast_2606	99	0	0
2833	pg_toast_2606_index	99	0	0
4157	pg_toast_2612	99	0	0
4158	pg_toast_2612_index	99	0	0
4159	pg_toast_2600	99	0	0
4160	pg_toast_2600_index	99	0	0

Work pager

6. sql сценарий

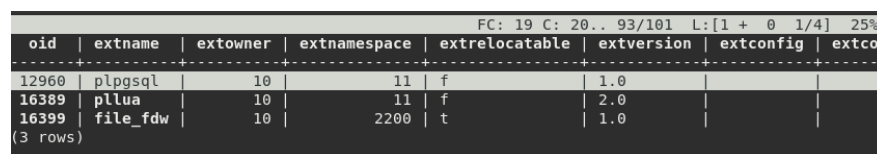

The screenshot shows a GNU nano 3.2 terminal window with a SQL script being edited. The script creates a table 'test' with two integer columns 'x' and 'y', and inserts three rows of data.

```
create table test (x integer, y integer);
insert into test values (33,94),
(1,44),
(15,66);
```

Create table

7. select * from pg_extensions

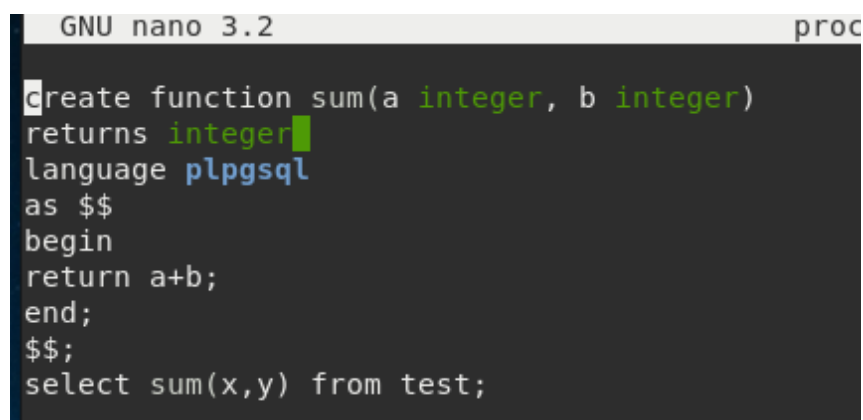

The screenshot shows a psql terminal window with the command 'select * from pg_extensions;' executed. The output is a table with columns: oid, extname, extowner, extnamespace, extrelocatable, extversion, extconfig, and extco. The table lists installed extensions.

oid	extname	extowner	extnamespace	extrelocatable	extversion	extconfig	extco
12960	plpgsql	10	11	f	1.0		
16389	pllua	10	11	f	2.0		
16399	file_fdw	10	2200	t	1.0		

Installed extensions

8. Sql сценарий для расчета

The screenshot shows a GNU nano 3.2 terminal window with a SQL script being edited. The script creates a function 'sum' that takes two integers and returns their sum, and then queries the 'test' table to calculate the sum of 'x' and 'y' for each row.

```
create function sum(a integer, b integer)
returns integer
language plpgsql
as $$
begin
return a+b;
end;
$$;
select sum(x,y) from test;
```

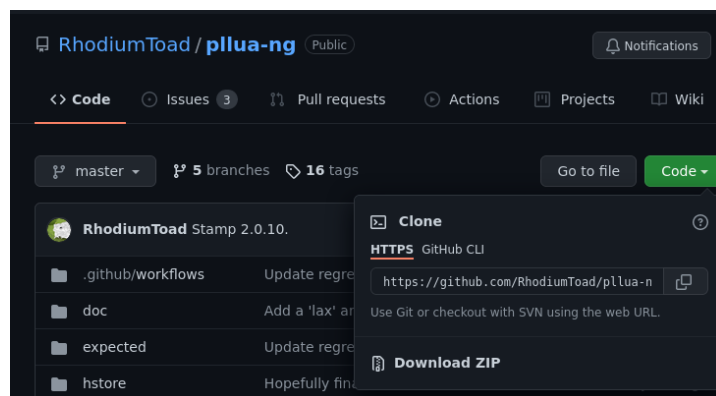

a+b

9 Работа sql

```
postgres@debian:~$ psql -d ser_db -f proced.sql
2021-10-20 19:16:31.067 MSK [26377] ERROR: func
types
2021-10-20 19:16:31.067 MSK [26377] STATEMENT:
    returns integer
    language plpgsql
    as $$
    begin
    return a+b;
    end;
    $$;
psql:proced.sql:8: ERROR: function "sum" already exists
sum

(3 rows)
```

Working func

10. Install pllua

Install pllua from git

11. Makefile

```
# General
LUA_INCDIR ?= /usr/include/lua5.3
LUALIB ?= -llua5.3
LUAC ?= luac5.3
LUA ?= lua5.3
```

12 Make/ make install

13. create extension pllua

14. pg_extensions

oid	extname	extowner	extnamespace	extrelocatable	extversion	extconfig	extco
12960	plpgsql	10	11	f	1.0		
16389	pllua	10	11	f	2.0		
16399	file_fdw	10	2200	t	1.0		

(3 rows)

15. Script lua

```
create function sumLua(a integer, b integer, c integer)
returns integer
language pllua
as $$
local d = (a+b)*c;
return d
$$;
select sumLua(x,y,5) from test;
```

```
postgres@debian:~$ psql -d ser_db -f procedLua.lua
2021-10-20 19:29:27.512 MSK [26456] ERROR: function "sumlua" already exists
int types
2021-10-20 19:29:27.512 MSK [26456] STATEMENT: create function sumLua(a integer, b integer, c integer)
returns integer
language pllua
as $$
local d = (a+b)*c;
return d
$$;
psql:procedLua.lua:7: ERROR: function "sumlua" already exists
sumlua
-----
        635
        225
        405
(3 rows)
```

Working lua script

16. Установка file_fdw

```
postgres@debian:~$ cd postgresql-14.0/contrib/file_fdw/
postgres@debian:~/postgresql-14.0/contrib/file_fdw$ ls
data      file_fdw--1.0.sql  file_fdw.control  file_fdw.so  Makefile  sql
expected  file_fdw.c        file_fdw.o        input        output
postgres@debian:~/postgresql-14.0/contrib/file_fdw$
```

Install fdw from contrib

17. Make install

18. create extension file_fdw

19. select * from pg_extensions

oid	extname	extowner	extnamespace	extrelocatable	extversion	extconfig	extco
12960	plpgsql	10	11	f	1.0		
16389	pllua	10	11	f	2.0		
16399	file_fdw	10	2200	t	1.0		

(3 rows)

20 file data.csv

```
The Edit View Search Terminal Help
GNU nano 3.2 data.csv
